## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 21, drawn to a method of making a virus or viral proteins, classified in class 435, subclass 320.1. If applicant elects this group, applicant is required to elect one virus listed in claim 21. Applicant should note that this is not a species election since all of the viruses are structurally distinct and have different modes of transmission, etiology and pathology.
- II. Claims 36, 38 and 39, drawn to a kit for determining the activity of a protease in a sample, classified in class 435, subclass 5.
- III. Claims 40-44 and 46-51, drawn to a method of concentrating influenza virus, classified in class 435, subclass 239.
- IV. Claims 45 and 52, drawn to infectious influenza virus, classified in class 536, subclass 235.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method of making can be used to produce any of the different viruses, such as rotavirus, coronavirus, gastroenteritis virus, flavivirus, tick-borne encephalitis virus and yellow fever virus.

Art Unit: 1648

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the different methods require different components to carry out the method, different method steps and different goals.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
